## My story choose your own path online

For many students, choosing a primary is the first step toward choosing a career path, so it's normal that you don't know about it. The most popular majors are business, health care, social sciences and psychology. Engineering, biology, communications and art are also among the popular majors. However, students do not need to choose a popular major. Many colleges offer focused, unique majors dedicated to specific career paths. For example, several schools offer degrees in horse studies, and many schools allow students to create their own interdisciplinary majors. This page provides recommendations for choosing a key one, including specific steps to take when choosing a field of study. Some college freshmen arrive on the first day, knowing their core, while others will take a year or more to decide. Both routes provide benefits and disadvantages for students. Selecting a great early one can help prospective students find a school with a strong reputation in their field. In addition, students interested in less common majors can make sure that their college offers courses in their field. Many students come to college undecided about their core. Remaining undeclared can give students time to take out many areas and find one that is in their best interests and career goals. Most undergraduate programs require about 40-50 credits per major, which means most of the 120 credits for a degree are out for the major. Taking general education classes for one or two years allows students to explore several areas before declaring large. Strengths and interests Students should take into account their strengths and interests when choosing the core. To improve their interests, students can start looking at their transcripts. What class do they want, and what skills do those classes have in common? High school students who like to read books and write papers in language art and social studies can enjoy the majors of social sciences and humanities, which require many of the same skills. Students who love technical problem solving in math and science classes may consider STEM majors. Many strengths fit in with a few majors. For example, students who like to write can excel in writing and English majors without majors such as communication, public relations, marketing and history. Similarly, students interested in mathematics can pursue big things in areas such as economics, engineering, science or accounting. Students can also turn to their extracurricular, hobbies and volunteer experiences to determine their strengths. For example, if a student enjoys photography, they can enjoy majoring in graphic design or journalism. Career paths Some majors provide targeted training for a particular career path, while others lead to different careers. For example, students who are the main students in nursing are studying health evidence-based practices and physiology, preparing for the NCLEX-RN exam and a registered nursing licence. While nursing majors can pursue a career outside nursing, specialised training in this field. Many majors offer more open-ended opportunities when it comes to career paths. Most of the great stories, for example, do not make history. According to a 2017 study, the five most important career paths in history include education, management, sales, administration and legal professions. Other liberal fields of art, including science, social studies and humanities, similarly train graduates for many different careers. Some careers require a certain degree to earn a license for practice. For example, teachers in public schools have to earn a license, which requires a degree of education. Other careers do not require a certain degree, but employers in this area may give priority. For example, software developers may be from many educational backgrounds, but a computer science degree gives candidates a competitive advantage in the labour market. Several professions require a graduate degree. Lawyers, doctors, psychologists, economists, nurses and school leaders need graduate degrees. In these areas, the bachelor major can provide valuable preparation for graduate studies. Pre-med students often choose science major, while preschool students benefit from social sciences and humanities courses. Undecided students can explore job growth and earn potential in various careers to make an informed decision about their main and career path. The Office for Labour Statistics 'SDM' Professional Prospects Guide presents job growth forecasts, entry-level education requirements and median salaries for hundreds of quarries. For each profession, the GSP also lists the recommended majors and how to enter the profession. Choosing school students with a strong sense of their core can research programs in their field and learn more about the basic requirements of different schools. Looking at course opportunities and faculty majors can help students narrow down their options. Undecided students may want to choose a school that offers a wide range of majors. Some universities, for example, offer majors over 100 subjects. Attending a community college or enrolling in online courses to meet general education requirements can help undecided students learn more about the different majors while saving money. Students who take this route should make sure that the credits they earn will be transferred to their undergraduate institution. When choosing a school, prospective students should always check the accreditation status of the institution. Schools accredited at regional level meet high standards of academic excellence. Accreditation benefits students in important ways. For example, only students in accredited schools are entitled to federal financial assistance, and many schools only accept and transfer credits from accredited authorities. School programmes may also have accreditation, such as business, engineering, education and nursing programmes. Prospective pupils can check the status of the accreditation status of the school or programme education database. College fields offer major dozens of fields such as business, engineering, education and design. Students can also pursue major anthropology, zoology, sociology and psychology. This section presents a common field of study. But some majors don't fit perfectly into one category, and some schools organize their majors differently. When choosing a principal, students should always check their future school options. The field of art and design is among the most popular majors. Art and design are not limited to performing and visual arts. Students can also study architecture, art history, fashion and animation. Many art and design programs also offer major specialized areas such as graphic design and game design. Through a degree in art and design, most majors take introductory art classes in several fields, including studies in arts, art history, and digital art. Art and design appeal to creative students, with a strong focus on detail. Strong interpersonal skills also help the success of art and design majors. If [any of you] don't sit well with you, reconsider online disclosure, says Stamoulis. It's our human nature to focus on the negative, so even if you get a lot of comments about support, you're probably frustrated by the negative comments. This is especially true if your abortion was related to rape or other trauma. There's always a chance that a negative or unexpected answer will worsen your pain or Google search on the road, which will start your story again when you least expect it. I think people expect such a story to be greeted with compassion online, but there will always be trolls who mock history, says Stamoulis.Keep in mind that if you have a strong support group of friends and relatives, harassment can be much tolerable. Mason went out of her way to give his friends a head before posting her abortion story on Instagram to ask for their support, which she said made a world of difference. First of all, your decision should be about you. At this political moment, as people are voicing their stories and the awful legislative news seems endless, it's understandable that you can feel the pressure to join the conversation. But try to resist the feelings of guilt or duty. I've never framed talking about my abortion history as a political or moral or feminist imperative, says Bonow.And if you're not sure? You can wait until you decide. Unfortunately, the threats to reproductive rights will be permanent, and there will be many opportunities to share your story. Finding relief and making changesWith all these reasons to reveal and undisclosed the narrative of abortion has become a sort of subtle and complex advantages and disadvantages. And while only you can decide what is right for you personally, the question arises: Is the benefit even worth the potential harm? Unlike disclosure settings, there are no tons of studies on health risks or the benefits of posting such personal stories online. But even without solid research backing up, many find it difficult not to feel the consequences of silence on a personal level. Don't talk about what happened to us, not talk about our trauma and about the people who us over and hurt us, makes some of us sick, says Bonow. Not processing our lives in real and honest ways [can have] a real, disastrous effect on our mental health. But on a larger scale, coming forward as having had an abortion may not pack the political punch it once made. This may be a strong platform for finding a community, raising voices that have been historically silenced, and fighting stigma, but when it comes to making anti-abortion politicians care about our lives, Ross is not optimistic about the power of storytelling. People die, and it doesn't change their minds, she says. Women are in detention and immigration centers who need abortion services and this does not change their minds. Is sharing your story going to change the legislature's intent to derail Roe's mind? Probably not. But will this affect the overall cultural perception of abortion and why access to reproductive health care is important? Perhaps. The goal is to change the culture, how we think about people who get abortions, and what we think we know about people who get abortions, says Rohlinger. Storytelling can really create community action that can influence change, and social media platforms allow individuals, citizens and movements of all stripes to come together and organize in a whole new way. Maybe it's a story, maybe not. There is no singular way to make an impact as an activist. Instead, you can decide to volunteer, donate or write to your state legislators. You can decide to bring meals or signs to protesters or to provide childcare or transportation activists. The point is that there are many ways to get involved. After all, it depends on your personal motivation and goals, and it depends on you if and how you contribute.\*Names have been changed to protect anonymity upon request. Related links: links:
